

Passing Source Ip Through APIGEE

Author @indranil banerjee

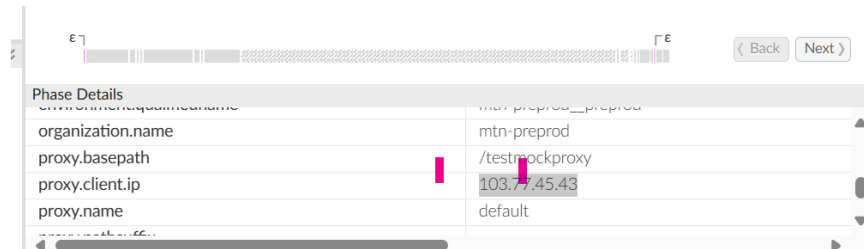

AC-51: Apigee New request parameter add while the request is coming **DONE**

As discussed with @Omololu Fabelurin @Rupesh Kansara @Umamaheswara Makineni @Siddiq.Saliha@mtn.com we needed to pass the source IP.

Solution Approach:

Log in to Apigee micro gateway create a proxy on the known URL **assign message** policy on **preflow**.

and attach required field mapping in this case i have attach **ip** to **proxy.client.ip**.

Phase Details	
organization.name	mtn-preprod
proxy.basepath	/testrockproxy
proxy.client.ip	103.77.45.43
proxy.name	default

Please check the IP is showing.
